

Application Number: 10/532,178
Amendment dated: June 7, 2010
Reply to Office Action of: March 4, 2010

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1 – 28 (Canceled)

29. (Previously Presented) A method for analyzing a change in the functionality of the heart and the respiratory system of a patient, comprising:

- identifying the respiratory activity (22) and cardiac sounds (20), wherein said identifying comprises:
 - 1. collecting at least said cardiac sounds (20) by the means of at least one microphone;
 - ~~4~~2. separating said cardiac sounds (20) apart from the sounds related to said respiratory activity (22), by the means of a signal conditioning module (28);
- temporally segmenting said respiratory and said cardiac sounds to express the segments of physiological rhythmicity, by the means of a feature extraction module (30);
- extracting stable features of the heart sounds with respect to their timing in the respiratory cycle, thus providing synchronized stable features for diminishing stochastic variability, by the means of a timing analysis module (32);
- averaging the features of segments- of heart sounds with respect to the corresponding respiratory cycle; wherein the averaging results in — whilst averages in which preserving the temporal variability- of said segments is preserved;
- determining the extent of temporal variability ~~of~~ in groups of synchronized stable sound features, and
- detecting change over time of at least one feature in a
